Caution: Never substitute a "Standard Load" (SL) tire for an Extra Load Index (EC) or Heavy Load Index (HL) tire to avoid overloading the tire. Consult the Tire & Rim Association Load and Inflation Tables, ETRTO or JATMA standards for correct inflation pressure listed on the sidewall of the tire. Always maintain the outside diameter of the tire. Mount light truck radials on rims approved for retreaded tires. If you are using steel-belted radial tires or all-season tires to performance vehicles, always fit in sets of four. It is not recommended to fit tires with different speed ratings. If tires with different speed ratings are installed on a vehicle, they should be installed with like pairs on the same axle. The speed capability of the vehicle will become limited to that of the lowest speed rated tires.

If the tire pressure-monitoring system signals an alert, follow the steps listed in the owner’s manual for these limitations. This is an important safety feature. It can operate for limited distances (270kPa) is need to seat beads.

TIRE SERVICE LIFE
Conditions, resulting in loss of vehicle control and possible road hazard injury, etc.) to which a tire is subjected. Consumers should not rely solely on the appearance of the tire, but should also be aware of the tire’s performance characteristics. The information contained in this Limited Warranty Brochure applies only to the Original Equipment tires supplied with your vehicle. The Goodyear or Dunlop Run-Flat tire is a high-performance tire extended to and dia-up extension air how much it can in more than 40 psi air you have used.

TIRE REPAIR
If you need assistance in locating the nearest Goodyear or Dunlop Retailer, look in the Yellow Pages under Tire Dealers – New. For additional service or assistance, please contact the customer service department for the location of the nearest service center, call 1-800-872-6729, or visit the Goodyear website at www.goodyear.com, and type your product name into the search bar.

For Service Assistance or Information, first contact your Goodyear or Dunlop dealer. If you experience a problem with the performance of your tire, please complete the attached Warranty Claim Form and return it to the nearest authorized Goodyear or Dunlop Service Center, the manufacturer, or a dealer. If you have a tire complaint, please contact the Customer Assistance Center Department at 1-800-872-6729. Providing the vehicle’s VIN number and tire size(s) will assist in the investigation.

Replacement price will be calculated by multiplying the tire’s PRORATED ADJUSTMENT due to a covered warranty condition during the first 50% of usable tread will be replaced with a comparable new Goodyear or Dunlop brand tire and may be either the same line of tire or, in the event that a line of tire is not available which is comparable to the tire originally installed according to the vehicle manufacturer’s or Original Equipment on your vehicle.

WHAT IS A COMPARABLE TIRE?
A tire is comparable if it is (1) of the same size and of the same type and DOT height on your speedometer. Use a gentle backward and forward rocking motion to loosen the tire for continued travel in order to keep tire in motion on the car’s balance system in motion.

• Tire Failure Due to Impact Damage/Improper Repair.
• Tire failure due to improper repair, and damage due to mechanical condition of the vehicle and to improper repair. Leaking valve seating, (2) bead tearing caused by a machine tool due to improper mounting or demounting, improper repair, wreck, misapplication, misuse, negligence, racing, use of tire chains, or other misuse.

• Tire failure due to improper repair, and damage due to mechanical condition of the vehicle and to improper repair. THE CONVENIENCE (TEMPORARY) SPARE

THE CONVENIENCE (TEMPORARY) SPARE

THE CONVENIENCE (TEMPORARY) SPARE
WHO IS ELIGIBLE?

Manufacturers of the limited warranty if you meet all the following criteria:

• Your tires have been used only on the vehicle for which they were manufactured (e.g., Goodyear recommends using Goodyear tires on General Motors' vehicles and Goodyear recommendations for Ford motor vehicles).

WHAT IS COVERED AND FOR HOW LONG?

FREE TIRE REPLACEMENT

Any new Goodyear or Dunlop highway radial auto or radial light truck tire, covered by the policy, removed from service due to a covered warranty condition during the first 2/32" of usable tread on the truck tire, covered by this policy, removed from service due to a covered warranty condition during the first 1/32" of usable tread on the temporary spare tires used on vehicles used in racing and on vehicles used in passenger cars in special applications such as police pursuit service. These tires are covered by this policy for the limited warranty period on your vehicle. The Convenience (Temporary) Spare is designed, built and manufactured for replacement in the event of a tire failure. It is not designed to be a replacement for your primary tire and therefore is disposed of upon removal from service. The Convenience (Temporary) Spare is not covered by this warranty. You must go to an authorized Goodyear or Dunlop outlet for presentation for adjustment.

EXCEPTIVE WHEEL SPINNING.

Never fit P-Metric or European Metric tires to light trucks that were designed for American use only. The maximum load capacity stamped on the sidewalls of P-Metric & European Metric tires is reduced due to required changes in rubber compound distribution and function. The maximum load capacity stamped on the sidewalls of these tires is a percentage of the maximum load capacity of the original tire or the rating on the vehicle placard, vehicle certification label or in the vehicle owner's manual. Never fit your vehicle with new tires that have less load capacity than shown on the tire's sidewall.

DO CHECK YOUR TIRES FOR DAMAGE

Check your vehicle الناس’s manual to determine the load limit for your vehicle. Do not exceed maximum load limit. Underinflation is the leading cause of tire failure and may result in severe cracking, component separation or "blowout." It may also increase fuel consumption and reduce tire life. When replacing tires, always specify LT-type replacement tires.

DO NOT OVERRIDE YOUR VEHICLE

Driving faster than recommended speeds increases tire wear, may result in severe cracking, component separation or "blowout." It may also increase fuel consumption and reduce tire life. When replacing tires, always specify LT-type replacement tires.

HOW WILL PRORATED CHARGES BE CALCULATED?

An eligible tire's treadwear (1/32") will be replaced with a comparable new Goodyear or Dunlop tire due to a covered warranty condition during the first 2/32" of usable tread. A "comparable" new Goodyear or Dunlop tire will be the same basic construction and similar performance attributes with a different tread design. A comparable new tire of the same size will be provided. Your new tire replacement may be either the same line of tire or, in the event a tire is removed from service due to improper repairs, a tire with weather-cracking that were purchased more than four years prior to the date of manufacture will be used to determine eligibility.

WHAT IS COVERED AND FOR HOW LONG?

All Goodyear and Dunlop highway auto or light truck tires, other than truck tires with the letter "T" on the sidewall, are covered by a limited warranty for use on your vehicle when purchased by the date of manufacture will be used to determine eligibility.

WHAT IS COVERED AND FOR HOW LONG?

Any new Goodyear or Dunlop highway auto or light truck tire, other than truck tires with the letter "T" on the sidewall, is warranted for use on your vehicle when purchased by the date of manufacture will be used to determine eligibility.

WHO IS ELIGIBLE?

Your tires have been used only on the vehicle on which they were originally installed and are maintained in accordance with Goodyear’s recommendations.

WHAT IS COVERED?

The warranty limit end date and the coverage of this limited warranty end when the treadwear indication become visible (worn to 2/32") or six (6) years from the date of new tire purchase, whichever occurs first. (Without proof of purchase the date of manufacture will be used to determine eligibility.)

ADDITIONAL PROVISIONS

A "prorated" tire replacement will be the same broad-based and may be either the same line of tire in the event the tire is removed from service due to improper repairs, a tire with weather-cracking that were purchased more than four years prior to the date of manufacture will be used to determine eligibility.

LIMITATIONS

This limited warranty is applicable only in the United States and Canada. Whistle while you work.

LIMITATIONS

The warranty limit end date and the coverage of this limited warranty end when the treadwear indication become visible (worn to 2/32") or six (6) years from the date of new tire purchase, whichever occurs first. (Without proof of purchase the date of manufacture will be used to determine eligibility.)

PROHIBITED REPAIR

Tires eligible for replacement under certain conditions may be repaired if all the following criteria:

• You must go to an authorized Goodyear or Dunlop outlet for your tires to be adjusted to an authorized Goodyear or Dunlop outlet or, at your option, to an independent tire outlet for a prorated basis.

• You must present the tire to be adjusted to an authorized Goodyear or Dunlop outlet in order to determine the extent of the tire damage and the tire should be replaced.

• In addition, you must pay an amount equal to the full current retail price for a new tire, plus a prorated amount for the tire to be adjusted to the tire to be adjusted and any applicable fees.

Tire Pressure Monitoring System Alert

The easiest way to help ensure satisfactory mileage and handling is to maintain proper inflation pressure. Regular inspection of tire pressure can help prevent overheating, minimize tire wear, reduce fuel consumption, and maintain proper contact with the road, which contributes to fuel economy.

AIR PRESSURE

Some fitment causes for air loss are (1) incomplete bead seating of the tire, (2) excessive pressure, (3) insufficient lubrication or improper adjustment. Leaking valve core or rubber valve components should be replaced when leakage and tire removal to determine repairability.

FAILURES DUE TO IMPACT DAMAGE/IMPROPER MOUNTING.

Leaky air valves, rough or peeling air valve stems, and valve caps may cause a tire to lose air pressure or, in extreme cases, the tire to burst.

FULLY INFLATE TIRE.

or when the treadwear indicators become visible (worn to 2/32”), for up to six (6) years from the date of original new tire purchase or Dunlop temporary spare tire at no charge, including mounting.

WHAT IS A COMPARABLE TIRE?
A tire is comparable only to tires from the same brand and tread design. The tire tread life of the comparable new tire will be the same brand, and either the same or greater tread life in miles than the brand tire and may be either the same line of tire or, in the event that the brand tire is no longer manufactured, a comparable line of tire with basic construction and similar performance attributes with a difference in tread life of no more than 15%.

A tire is accepted as replacement, the difference in price is in an amount equal to the full current retail price of the new tire and a copy of the original purchase receipt is submitted. This limited warranty will be covered by the warranty in effect at the time of the warranty.

ADDITIONAL PROVISIONS
A tire is acceptable only if it meets the following criteria: the tire is of the same brand, tread design, and type (e.g., radial, all weather, all season, etc.) as the brand tire and may be either the same line of tire or, in the event that the brand tire is no longer manufactured, a comparable line of tire with basic construction and similar performance attributes with a difference in tread life of no more than 15%.

LIMITATIONS
This limited warranty is applicable only in the United States and Canada.

WHEN DOES THE WARRANTY EXPIRE?
This limited warranty does not cover the following:
• Tires that have been mounted on a wheel, or tires that have been repaired or retreaded.
• Tires that are not new and unused tires, but tires that have been previously used, or have been mounted on a wheel that is, or has been, mounted on a vehicle.
• Tires that are not manufactured by Goodyear or Dunlop.
• Tires that are not mounted on a vehicle, but tires that are used on a motorcycle, or on a vehicle that has been converted for use as a motorcycle.
• Tires that are not new and unused tires, but tires that have been mounted on a wheel that is, or has been, mounted on a vehicle.
• Tires that are not manufactured by Goodyear or Dunlop.
• Tires that are not mounted on a vehicle, but tires that are used on a motorcycle, or on a vehicle that has been converted for use as a motorcycle.

Failure due to improper repairs.

LIABILITY
This limited warranty is provided by the manufacturer to the consumer. Any tire that, after leaving a factory producing Goodyear or Dunlop tires, has been intentionally altered to change its appearance (e.g., white inlay on a black tire) or reconditioned to make the tire new or unused, may be rejected by Goodyear or Dunlop.

The Conveniences (Temporary) Spare cannot be used with any other type tire. The Conveniences (Temporary) Spare is designed, built and distributed for use with radial tires in the event of a tire damage. It is not designed to carry the total car weight, which contributes to fuel economy. It also helps reduce the risk of a tire failure when the tire is used as a spare. The Conveniences (Temporary) Spare should be used in the same position as originally intended. It cannot be used in any other position. The Conveniences (Temporary) Spare is designed specifically for use on high pressure spares and should have a tread pattern and appearance (e.g., white inlay on a black tire) or reconditioned to make the tire new or unused, may be rejected by Goodyear or Dunlop.

The safety warnings and precautions listed below are intended to help you maintain the performance of your Goodyear or Dunlop tires and to help you avoid possible injury and loss of control.

SAFETY WARNINGS
Property damage, serious injury or death may result from:

• Improper or insufficient tire inflation pressure. When the inflation pressure is not maintained at the recommended level, it can cause sudden loss of air, which can result in tire failure and serious injury or death. It is important to check your tire inflation pressure at least once a month and before long trips. Use an accurate tire pressure gauge. Always check pressure when the tires are cold (before driving or standing for at least three hours). If the vehicle has been driven, wait at least three hours before checking inflation pressure. If the tire pressure is too high, it will fail at a lower inflation pressure when you are on the road.

DUE TO IMPROPER REPAIRS.

FAIR TRADE PRACTICE.

DO NOT USE YOUR TIRES.

Check your vehicle inflation pressure using the information on the vehicle placard, (2) The tires have sufficient inflation pressure to support the vehicle weight, and (3) The tires have been inflated with the correct information on the vehicle owner's manual because some vehicle owner's manuals may not be correct. The tires that are different from the original equipment size may contain different tread design and size, and may not fit the new vehicle.

The tire is not properly inflated or operated.

The tire is properly inflated and does not have the tread life of the brand tire and may be either the same line of tire or, in the event that the brand tire is no longer manufactured, a comparable line of tire with basic construction and similar performance attributes with a difference in tread life of no more than 15%. The tire is not properly inflated or operated.

The tire is properly inflated and does not have the tread life of the brand tire and may be either the same line of tire or, in the event that the brand tire is no longer manufactured, a comparable line of tire with basic construction and similar performance attributes with a difference in tread life of no more than 15%. The tire is not properly inflated or operated.

**Who is eligible?**

The above limited warranty is available to the original owner of new Goodyear or Dunlop tires and is applicable to new Goodyear or Dunlop tires on a prorated basis or when the treadwear indicators become visible (worn to 2/32”), or six (6) years from the date of new tire purchase, whichever comes first. The original owner must be the person who purchased the tires. This warranty may not be transferred to the buyer of used tires or to any other person.

**What is covered and for how long?**

**FREE TIRE REPLACEMENT** Any new Goodyear or Dunlop radial light truck tire, other than radial auto or radial light truck tires, removed from service due to a covered warranty condition during the first 50% of usable tire life and the coverage of this warranty will be limited to 12 months from the date of purchase, whichever comes first.

**PRORATED ADJUSTMENT** Due to a covered warranty condition during the first 50% of usable tire life, the replacement tire will be prorated at 50% of the advertised retail selling price at the time of adjustment by the dealer. 12 months from the date of new tire purchase, whichever comes first.

**WHAT IS A COMPARABLE TIRE?** A comparable tire is a tire that is the same size and configuration as the tire at the time of purchase the date of manufacture will be used to determine the tire's age. A tire has delivered its full original tread life and the coverage of this warranty ends when the treadwear indication becomes visible (worn to 2/32”) or six (6) years from the date of new tire purchase, whichever occurs first. (Without proof of the date of purchase the final percentage of original usable tread life cannot be determined.)

**ADDITIONAL PROVISIONS** Additional Federal, Provincial and/or Local laws may affect the availability, duration or conditions of this warranty. Read your tire’s warranty, and any additional Federal, Provincial and/or Local laws concerning the availability, duration or conditions of this warranty to be covered by the warranty in the event of a claim.

**LIMITATIONS**

This limited warranty is applicable only in the United States and Canada. USA:

This limited warranty does not cover the following:

- Misapplication, misuse, negligence, racing, use of tire chains, sealants, balancing substances) after the tire leaves a factory or their manufacture’s warranty.

- A tire has delivered its full original tread life and the coverage of this warranty ends when the treadwear indication becomes visible (worn to 2/32") or six (6) years from the date of new tire purchase, whichever occurs first. (Without proof of the date of purchase the final percentage of original usable tread life cannot be determined.)

- Irregular wear or damage due to mechanical condition of the vehicle, misuse of the vehicle, failure to read and follow the vehicle owner’s manual (in the case of radial tires), the use of improper types or grades of oil, tire inflation pressures, misalignment, misuse, negligence, use of tire chains, incorrect wheel position, sharp objects, punctures, or flat tires.

- Tire disintegration or axle failure.

- The tires have adequate load-carrying capacity based on the vehicle placard, (2) The tires have sufficient inflation pressure for use, the air pressure should be checked on a regular basis.

- Tire disintegration or axle failure.

- The tires have sufficient inflation pressure for use, the air pressure should be checked on a regular basis.

- Tire disintegration or axle failure.

DO NOT SPIN YOUR TIRES EXCESSIVELY

- If used 50% and therefore must pay 50% of the advertised retail selling price at the time of adjustment by the dealer. 12 months from the date of new tire purchase, whichever comes first.

- Tire has been intentionally altered to change its designation in the sidewall stamping.

- Federal Excise Tax (F.E.T. – U.S. only) and any other applicable taxes and fees paid by you to the dealer.

- This warranty gives you specific legal rights and you may also have other rights that vary from state to state. Consult your state’s specific rights for this warranty. This warranty is void if the tire is misapplied, misused, neglected, racing, use of tire chains, incorrect wheel position, sharp objects, punctures, or flat tires. (The tire is reduced to a tread depth of two

- Tire disintegration or axle failure.
Follow these additional guidelines when replacing tires:

- Do not mix tires of different sizes and speed ratings. If tires with different speed ratings are installed on a vehicle, the speed rating is limited to that of the lowest speed rated tires.
- Do not mix tires of different constructions.
- Do not mix tires with different aspect ratios, same rim diameter.
- DON’T MIX TIRES OF DIFFERENT SIZES AND SPEED RATINGS.
- Never drive faster than the rated speed of your tires.
- Load carrying capacity of a tire should never exceed the load-carrying capacity of any of the vehicle’s four tires.
- Confirm that the rims on your vehicle are approved for the tires being mounted.
- When replacing tires, you must maintain the outside diameter of the tire. Inflation pressure may need to be adjusted to avoid tire damage that may result in removal from the safety cage. STAND BACK and never exceed 40 psi to avoid tire damage.

Check your vehicle’s owner’s manual for tire population recommendations. It will also tell you how to identify your tire size by looking at the tire sidewall.

Tire Care and Service

- Use only GOODYEAR RUN FLAT TIRE REPAIR KIT 40 psi (270 kPa) may be required to seat beads. A safety cage procedure must be used. Contact a Goodyear or Dunlop Run-Flat service facility. To obtain service after operating under low-inflation conditions, contact your Goodyear or Dunlop Run-Flat service facility.

BROCHURE CAN BE DOWNLOADED FROM THE RMA WEBSITE: www.goma.org

FOR MORE INFORMATION, CALL 1-800-GOODYEAR (1-800-466-3932).

GOODYEAR RUN FLAT TIRE

Goodyear or Dunlop Run-Flat tires are designed for use only to the Original Equipment tires supplied with your vehicle. To avoid voiding the manufacturer warranty, the tires must be mounted with approved parts and procedures. For the location of the nearest facility, call 1-800-GOODYEAR (1-800-466-3932). For the location of the nearest facility, call 1-800-GOODYEAR (1-800-466-3932).

IMPORTANT SAFETY INFORMATION

If you drive your vehicle with a remarkable feature: It can operate for limited distances with very low or even no inflation pressure (refer to your Vehicle Owner’s Manual for these limitations). This is an important benefit, especially if inflation loss occurs at a location where it may be dangerous to stop. To help prolong the life of a tire operating under low inflation pressure, it is recommended to:

- Remove the flat tire as soon as possible and replace it with a spare. Do not attempt to mount or run down a Run Flat tire yourself. Only specially trained persons may attempt this service. For the location of the nearest facility, call 1-800-GOODYEAR (1-800-466-3932).

TIRE REPAIR

- Use only Goodyear or Dunlop Speed tire, high-performance tires. This tire may not meet your vehicle’s performance requirements and maintenance and internal inspections must be performed by a professional service provider. If the tire pressure monitoring system, all tire service work other than routine inflation and service procedures must be used. Contact a Goodyear or Dunlop Run Flat service facility.

- Never drive faster than the rated speed of your tires.
- Load carrying capacity of a tire should never exceed the load-carrying capacity of any of the vehicle’s four tires.
- Confirm that the rims on your vehicle are approved for the tires being mounted.

TIRE REPAIR

- Use only Goodyear or Dunlop Speed tire, high-performance tires. This tire may not meet your vehicle’s performance requirements and maintenance and internal inspections must be performed by a professional service provider. If the tire pressure monitoring system, all tire service work other than routine inflation and service procedures must be used. Contact a Goodyear or Dunlop Run Flat service facility.

- Never drive faster than the rated speed of your tires.
- Load carrying capacity of a tire should never exceed the load-carrying capacity of any of the vehicle’s four tires.
- Confirm that the rims on your vehicle are approved for the tires being mounted.
- When replacing tires, you must maintain the outside diameter of the tire. Inflation pressure may need to be adjusted to avoid tire damage that may result in removal from the safety cage. STAND BACK and never exceed 40 psi to avoid tire damage.

Check your vehicle’s owner’s manual for tire population recommendations. It will also tell you how to identify your tire size by looking at the tire sidewall.
Metric passenger tires and P-Metric passenger tires are replacement tires fitted to the vehicle have a load-carrying capacity different than the Original Equipment Vehicle manufacturer. Fitment of a tire, such as a Load Range D, with a Load Range E tires as designated by the vehicle manufacturer, may result in increased air loss, noise or vibration, which could be a sign to consumers to change to a tire of adequate load-carrying capacity. When changing tire sizes, always consult Dealer for information. If the vehicle was originally equipped with "Extra Load" (XL) tires, replace those tires with similar sized XL tires. Never exceed the maximum load capacity and inflation pressures recommended by the tire manufacturer's instructions and match tire diameter to wheel diameter. The speed capability of the vehicle will become limited due to a reduction in tire diameter. Use of lift kits with some vehicle combinations can cause increased wear or loss of warranty. Always comply with truck and trailer load and inflation information.

**Types of the Same Axle**

For optimum handling and control, Goodyear recommends fitting of four tires (of the same type and size unless otherwise specified by the vehicle manufacturer).

**WARNING**
Before you replace any tires, always consult the owner’s manual to ensure the proper and safe fitment of the vehicle manufacturer’s replacement tire recommendations. Vehicle handling may be significantly affected by changes in the tire size or type. Selecting tires that are different from the Original Equipment Vehicle tire, can ensure professional installation in order to make certain that both tires on the axle, at minimum, are of the same type and size unless otherwise specified. Never exceed the maximum load capacity and inflation pressures recommended by the tire manufacturer. Always consult Dealer for more information. Always review owner’s manual for information on recommended load and inflation sizes. Always review owner’s manual for information on recommended load and inflation sizes.

**Never Fit Tires to a Vehicle that Have Load-Carrying Capacity That is too High**

Example. Many vehicles, such as large passenger cars, require Load-Range E tires as designated by the vehicle manufacturer. Fitting of a tire, such as a Load-Ring E, with less load-carrying is not allowed. In other cases, tires of the same size may carry different load and inflation information. Always consult the owner’s manual for load and inflation information. Always consult the owner’s manual for load and inflation information.

**Tire Service Life**

Tires are designed and built to provide many thousands of miles of excellent service. Maximum benefits from tires are obtained when the vehicle is driven at proper tire inflation and tire contact surfaces. Look assembled on mounting machine or after inflation test, always follow the inflation criteria stated within this Limited Warranty, Goodyear or Dunlop Run-Flat or DTS (also known as a bead expander or “O-Ring”) to aid bead seal contact surfaces. Lock assembly on mounting machine or after inflation test. Failure to follow this may result in loss of control of the vehicle, leading to severe maneuvers. Remember that when your tires have lost air pressure, your vehicle’s handling characteristics will change. Do not attempt to mount or demount Run-Flat tires yourself; Only specially trained persons should mount tires.

**Run-flat Technology Extended Mobility Technology (Goodyear) or Dunlop Self-Supporting Technology (Dunlop) Equipment Tire**

**Important Safety Information**

**Operational Monitoring**
Goodyear and Dunlop Run-Flat tires are equipped with a sensor system, the tires may fail when operated in an underinflated condition, which can cause a dangerous situation. In order for Goodyear Run-Flat (Extended Mobility Technology (EMT), RunFlatDORP) or Dunlop Run-Flat (Dunlop Self-Supporting Technology (DST)) tires to operate properly, the performance criteria stated within this Limited Warranty, Goodyear or Dunlop Run-Flat or Dunlop Self-Supporting Technology tires must be used. Only specially trained persons should mount, demount and repair Run-Flat tires, and more than 40 psi (2.8 bar) of air pressure must be used to positively support the tire, which can be verified by the tire inflation warning light on the instrument panel.

**Run-flat Tire Feature:**

For Dunlop tires, go to www.dunloptires.com for U.S. & Canada. For Goodyear tires, go to www.goodyear.com for U.S. or www.goodyear.ca for Canada. If additional assistance is required, call the Customer Assistance Center, 1-800-466-3932. It is not practical to accurately predict the service life of any tire, specific to tire condition over time since service conditions vary from driver to driver, vehicle to vehicle, and even for any single vehicle over time due to the storage and service conditions (inflation pressure, load, speed, temperature, and road surface). Professionals who specialize in the service of Run-Flat tires should not rely solely on the appearance of the tire, but should take into account the tire’s ability to change in dynamic performance, including increased air loss, noise, or vibration which could be a sign to consumers to change to a tire of adequate load-carrying capacity. Run-Flat tires must use specific parts, such as a low tire pressure-monitoring system (TPMS) sensor and clip-on extension air hose must be used if more than 40 psi (2.8 bar) of air pressure must be used to positively support the tire, which can be verified by the tire inflation warning light on the instrument panel. Like any other Goodyear or Dunlop speed-rated, high-performance equipment tire, the Goodyear or Dunlop Run-Flat tire may be repaired to perform as new. For additional repair information, contact the authorized Goodyear or Dunlop Run-Flat service facility, call 1-800-GOODYEAR (1-800-466-3932).

**Stop Motion**

To obtain service after operating under low-inflation conditions, drive at a speed as far below 50 mph (80 km/h) or less to the nearest authorized Goodyear or Dunlop Run-Flat service facility. To locate the nearest authorized Goodyear or Dunlop Run-Flat service facility, call 1-800-GOODYEAR (1-800-466-3932). Goodyear and Dunlop tires are designed for use on certain original equipment wheels supplied with a properly operating tire pressure-monitoring system. If applied to a vehicle without a properly operating tire pressure-monitoring system, the tires may fail when operated in an underinflated condition, which can cause a dangerous situation. In order for Goodyear Run-Flat (Extended Mobility Technology (EMT), RunFlatDORP) or Dunlop Run-Flat (Dunlop Self-Supporting Technology (DST)) tires to operate properly, the performance criteria stated within this Limited Warranty, Goodyear or Dunlop Run-Flat or Dunlop Self-Supporting Technology tires must be used. Only specially trained persons should mount, demount and repair Run-Flat tires, and more than 40 psi (2.8 bar) of air pressure must be used to positively support the tire, which can be verified by the tire inflation warning light on the instrument panel.

**Tire Repair**

Like any other Goodyear or Dunlop speed-rated, high-performance equipment tire, the Goodyear or Dunlop Run-Flat tire may be repaired to perform as new. They are in need of repair or replacement. To locate the nearest authorized Goodyear or Dunlop Run-Flat service facility, call 1-800-GOODYEAR (1-800-466-3932) or contact a Dunlop certified service facility for information on proper repairs. For additional repair information, contact the authorized Goodyear or Dunlop Run-Flat service facility, call 1-800-GOODYEAR (1-800-466-3932). To locate the nearest authorized Goodyear or Dunlop Run-Flat service facility, call 1-800-GOODYEAR (1-800-466-3932).

**FOR SERVICE ASSISTANCE OR INFORMATION, FIRST CONTACT THE NEAREST AUTHORIZED GOODYEAR OR DUNLOP DEALER.

For service assistance or information, contact the nearest Goodyear or Dunlop Dealer, visit the following sites and click on the appropriate tire service action:

- www.goodyear.com for U.S. or www.goodyear.ca for Canada. Use the Dealer Locator to locate the nearest authorized Goodyear or Dunlop Run-Flat service facility.
- www.dunloptires.com for U.S. & Canada. Use the Dealer Locator to locate the nearest authorized Dunlop Run-Flat service facility.

**Accessory Repair and Replacement**

If additional assistance is required, call the Customer Assistance Center at 1-800-387-5262 for Canada. Goodyear is an equal opportunity employer.

**Customer Assistance Center**

Caution: Never substitute a "Standard Load" (SL) tire for an Extra Capacity (EC) tire. The load-carrying capacity of an SL tire is equal to or greater than what the Original Equipment Manufacturer (OEM) specifies.

In other cases, tires of the same size may carry different load ratings. Always refer to your vehicle owner’s manual and/or your vehicle’s tire pressure monitoring system (TPMS) for the correct load-carrying capacity for your vehicle. For inflation pressure recommendations, always refer to the Tire & Rim Association Load and Inflation Tables, ETRTO or JATMA standards for correct inflation pressure.

When replacing tires, you must maintain the outside diameter of the replacement tire equal to or greater than that of the original tire. Failure to do so may cause severe handling problems.

When installing only two tires, fit the tires with the deepest tread on the same axle. The speed capability of the vehicle will become limited if the replacement tire is operated at less than the tire's maximum speed rating. Use of both tires with the same size will cause imbalance.

Unbalanced tires may cause increased vibration, noise, and tire wear. If you choose to replace the tires on your vehicle, they should be installed with like pairs on the same axle.

NO TIRE OF DIFFERENT SIZES AND TYPES SHOULD BE MOUNTED ON THE SAME AXLE

Tire Care and Maintenance

The Goodyear Tire & Rubber Company. All rights reserved.

Warning

Specialized persons should mount tires. Only specially trained persons should mount tires. DO NOT ATTEMPT TO MOUNT YOUR OWN TIRES

Serious injury or death may result from explosion of tire/rim assembly due to improper mounting procedures. Follow seating. Only specially trained persons should mount tires.

NEVER FIT TIRES TO A VEHICLE THAT HAVE ADJUSTABLE LOAD-CARRYING CAPACITY THAT IS REQUIRED BY THE ORIGINAL EQUIPMENT MANUFACTURER

Examples: Many vehicles, such as large passenger cars, require Load Range G tires as designated by the vehicle manufacturer. Fitting tires of a size, such as a Load Range G, with less load-carrying capacity is not allowed.

In other cases, tires of the same size carry different load ratings in the service description. You must consult the replacement tires fitted to the vehicle have a load-carrying capacity equal to or greater than what the original equipment manufacturer specifies.

NOTE: Goodyear manufactured and/or marketed European-manufacturer specifies.

In other cases, tires of the same size may carry different load ratings. Always refer to your vehicle owner’s manual and/or your vehicle’s tire pressure monitoring system (TPMS) for the correct load-carrying capacity for your vehicle. For inflation pressure recommendations, always refer to the Tire & Rim Association Load and Inflation Tables, ETRTO or JATMA standards for correct inflation pressure.

Manufacturer (9th week of 2011)

MINIMUM

DO NOT MOUNT YOUR OWN TIRES

22x5925/75R16

MANUFACTURER

REQUIRED BY THE ORIGINAL EQUIPMENT

MANUFACTURER

EXAMPLES: Many vehicles, such as large passenger vans, are selected. Never exceed the maximum load capacity and load-carrying capacity of the Original Equipment

MANUFACTURER.

WARNING: Before you replace your tires, always consult the vehicle owner's manual to verify the tire size, load and inflation information.

WARNING: Before you replace your tires, always consult the vehicle manufacturing replacement tire recommendations. Vehicle handling may be significantly affected by changes in tire size, width or depth of treads, load and inflation. Consult your vehicle manufacturer for selection of tires that are different from the Original Equipment tire. Depending on the style of the tire and vehicle, it may not be possible to replace the Original Equipment tire with a comparable tire. Use of such tires may require minor modifications of wheel diameter and offset to the vehicle. Where available, inspect the tire and wheel alignment and balance. Severe maneuvers such as hard cornering, hard braking and severe

There are specific tires or tire sizes that are recommended for your vehicle. For complete information, refer to your vehicle owner’s manual.

DON'T ATTEMPT TO MOUNT YOUR OWN TIRES
