

Forward Collision Warning (FCW)*

If the camera mounted between the windshield and the rearview mirror detects a vehicle in front of you when your vehicle speed is 10 mph (15 km/h) or higher—and it determines there is a likelihood of a frontal collision—the system provides you with visual and audible warnings.

If you do not brake in time or take preventive action, BRAKE appears in the display and a beep sounds continuously.

■ Changing Settings

Determine the alert timing or turn the system off using Customize Settings menu in the Vehicle Menu in the i-MID. Use the steering wheel controls to make and enter selections.

1. Press the MENU button on the steering wheel.
2. Select Customize Settings.
3. Select Driving Support System Setup.
4. Select Forward Collision Warning Distance.
5. Select Long, Normal, Short, or Off.
6. Press MENU to exit the menu.

Important Safety Reminder

FCW cannot detect all objects ahead and may not detect a given object; accuracy of the system will vary based on weather, speed, extreme interior heat, and other factors. FCW does not include a braking function. It is always your responsibility to safely operate the vehicle and avoid collisions.
