

Collision Mitigation Braking System™ (CMBS™)

Can assist you when there is a possibility of your vehicle colliding with a vehicle or a pedestrian detected in front of yours. The CMBS™ is designed to alert you when a potential collision is determined, as well as to reduce your vehicle speed to help minimize collision severity when a collision is deemed unavoidable.

* Not available on all models

■ Alert Stages

The system has three alert stages for a possible collision. Depending on the circumstances or CMBS™ settings, CMBS™ may not go through all of the stages before initiating the last stage.

Stage 1: Visual and audible warning.

Stage 2: Visual and audible warning, light brake application.

Stage 3: Visual and audible warning, strong brake application.

■ Changing Settings

1. From the HOME screen, select Settings.
2. Select Vehicle Settings. Then select Driver Assist.
3. Select Forward Collision Warning Distance.

■ Turning the System On or Off

When you turn the CMBS™ on and off, do the following.

1. Press the safety support switch.
2. Roll the left selector wheel to the CMBS™ symbol and select it.

A beep sounds and a message appears in the Driver Information Interface.

■ Important Safety Reminder

CMBS is designed to reduce the severity of an unavoidable collision. It does not prevent collisions nor stop the vehicle automatically. It is still your responsibility to operate the brake pedal and steering wheel appropriately according to the driving conditions.
