

Auto Idle Stop Function

To improve fuel economy, the engine stops and then restarts as detailed below. When Auto Idle Stop is on, the Auto Idle Stop indicator (green) comes on.

At	Automatic transmission	Engine status
Deceleration 	 <p>Stop the vehicle and depress the brake pedal.</p>	 <p>On</p>
Stop 	 <p>Keep the brake pedal depressed.</p>	 <p>Off</p>
Start-up	 <p>Release the brake pedal.</p>	 <p>Restarting</p>

Auto Idle Stop

To help maximize fuel economy, the engine automatically stops when the vehicle comes to a stop, depending on environmental and vehicle operating conditions. The indicator (green) comes on at this time.

The engine then restarts once the vehicle is about to move again, and the indicator (green) goes off.

The environmental and vehicle conditions that impact Auto Idle Stop system operation are varied.

A message associated with Auto Idle Stop appears on the driver information interface.

If the driver's door is opened while the indicator (green) comes on, a buzzer sounds to notify you that the Auto Idle Stop function is in operation.

Auto Idle Stop

The 12-volt battery installed in this vehicle is specifically designed for a model with Auto Idle Stop. Using a 12-volt battery other than this specified type may shorten the 12-volt battery life, and prevent Auto Idle Stop from activating. If you need to replace the 12-volt battery, make sure to select the specified type. Ask a dealer for more details.

The duration of the Auto Idle Stop operation:

- **Increases** in the ECON mode, compared to when the ECON mode is off, with climate control in use.

■ Auto Idle Stop System ON/OFF

To turn the Auto Idle Stop system off, press this button. The Auto Idle Stop system stops.

- Auto Idle Stop system will stop and the indicator (Amber) will come on.

The Auto Idle Stop system is turned on every time you start the engine, even if you turned it off the last time you drove the vehicle.

■ Auto Idle Stop Activates When:

The vehicle stops with the gear position in **[D]** and the brake pedal depressed. When you put the transmission into **[P]**, the Auto Idle Stop continues to operate, even if the brake pedal is released.

- If you depress the brake pedal, the engine may automatically restarts.

■ Auto Idle Stop does not activate when:

- The Auto Idle Stop **OFF** button is pressed.
- The driver's seat belt is not fastened.
- The engine coolant temperature is low or high.
- The transmission fluid temperature is low or high.
- The vehicle comes to a stop again before the vehicle speed reaches 3 mph (5 km/h) after the engine starts.
- Stopped on a steep incline.
- A gear position other than **[D]**.

☒Auto Idle Stop System ON/OFF

If you turn off the Auto Idle Stop system while it is activated, the engine will restart.

☒Auto Idle Stop Activates When:

Do not open a hood, during idling stop. If the hood is opened, the engine will not restart automatically.

In this case, restart the engine with the **ENGINE START/STOP** button.

Pressing the **ENGINE START/STOP** button causes the engine to no longer restart automatically. Follow the standard procedure to start the engine.

- The engine is started with the hood open.
 - Turn off the engine. Close the hood before you restart the engine to activate Auto Idle Stop.
- The battery charge is low.
- The internal temperature of the battery is 14°F (–10°C) or less.
- The climate control system is in use, and the outside temperature is below –4°F (–20°C) or over 104°F (40°C).
- The climate control system is in use, and the temperature is set to **Hi** or **Lo**.
-  is ON (indicator on).
- The rear fan is set to maximum speed.
 - Auto Idle Stop may not activate under other conditions when the rear climate control system*/rear cooling* is in use.
- When the Intelligent Traction Management is set to Snow, Mud*, or Sand*.

■ **Auto Idle Stop may not activate when:**

- The vehicle is stopped by braking suddenly.
- The steering wheel is operated.
- The fan speed is high.
- Altitude is high.
- The climate control system is in use, and there is a significant difference between the set temperature and the actual interior temperature.
- The climate control system is in use, and humidity in the interior is high.
- The rear fan is set to maximum speed.
 - ▶ Auto Idle Stop may not activate under other conditions when the rear climate control system*/rear cooling* is in use.

■ The Engine Automatically Restarts When

The brake pedal is released.

■ The engine restarts even if the brake pedal is depressed when:

- The Auto Idle Stop **OFF** button is pressed.
- When a steering wheel is operated.
- The transmission is put into **[R]** or **[S]**, or when it is set from **[N]** to **[D]**.
 - If you put the transmission into **[P]** after the Auto Idle Stop activates, the Auto Idle Stop continues to operate. In this case, the engine restarts when you depress the brake pedal.
- The pressure on the brake pedal is reduced and the vehicle starts moving while stopped on an incline.
- The pressure on the brake pedal is repeatedly applied and released slightly during a stop.
- The battery charge becomes low.
- The accelerator pedal is depressed.
- The driver's seat belt is unlatched.
- **[FRONT OFF]** is ON (indicator on).
- The climate control system is in use, and the difference between the set temperature and actual interior temperature becomes significant.
- The climate control system is being used to dehumidify the interior.
- The rear fan is set to maximum speed.
 - Auto Idle Stop may not activate under other conditions when the rear climate control system is in use.
- When the Intelligent Traction Management is set to Snow, Mud*, or Sand*.

* Not available on all models

►► The Engine Automatically Restarts When

If you are using an electronic device during Auto Idle Stop, the device may temporarily be turned off when the engine restarts.

■ Starting Assist Brake Function

Briefly keeps the brake applied after releasing the brake pedal to restart the engine.
This can keep your vehicle from unexpectedly moving while on an incline.
