

Collision Mitigation Braking System™ (CMBS™)*

Can alert you when a potential frontal collision with a vehicle or pedestrian is determined and reduce your vehicle speed when a collision is deemed unavoidable to help minimize collision severity.

The system provides visual and audible alerts if you do not take appropriate action to avoid a collision.

■ Alert Stages

The system has three alert stages for a possible collision. Depending on the circumstances or CMBS settings, CMBS may not go through all of the stages before initiating the last stage.

Stage 1: Visual warnings and audible warning

Stage 2: Visual warnings, audible warning, and light brake application

Stage 3: Visual warnings, audible warning, and strong brake application

■ Turning CMBS On or Off

Press and hold the CMBS OFF button. A beep sounds and a message appears in the MID. The CMBS indicator appears when the system is off.

■ Changing Settings

Change the alert distance. Use the steering wheel buttons to make and enter selections in the MID.

1. Select the Customize Settings display.
2. Select Change Settings.
3. Select Driver Assist System Setup.
4. Select Forward Collision Warning Distance. Select Long, Normal, or Short.
5. Exit the menu.

Important Safety Reminder

CMBS is designed to reduce the severity of an unavoidable collision. It does not prevent collision nor stop the vehicle automatically. It is still your responsibility to operate the brake pedal and steering wheel appropriately according to the driving conditions.
