Road Departure Mitigation (RDM)

Alerts and helps to assist you if the system determines a possibility of your vehicle unintentionally crossing over detected lane markings and/or leaving the roadway altogether while driving between 45-90 mph (72-145km/h).

If your vehicle is getting too close to detected lane markings without a turn signal activated, the system, in addition to a visual alert, applies steering torque and alerts you with rapid vibrations on the steering wheel, to help you remain within the detected lane. If the system determines that its steering input is insufficient to keep your vehicle on the roadway, it may apply braking. Braking is applied only when the lane markings are solid continuous lines. The system cancels assisting operations when you turn the steering wheel to avoid crossing over detected lane markings. If the system operates several times without detecting driver response, the system beeps to alert you.

- **Turning the System On or Off**

  Press the RDM button to turn the system on or off.

  When you turn the RDM on and off, do the following:

  1. Press the safety support switch.
  2. Roll the left selector wheel to the RDM symbol and push it.

  The message appears on the driver information interface when the system becomes on or off.
The RDM is in the previously selected ON or OFF setting each time you start the power system.

When you have selected **Warning Only** from the customized options using the audio/information screen, the system does not operate the steering wheel and braking.

### Changing Settings

**Models with Color Audio**

1. Press the MENU/CLOCK button.
2. Select Settings.
5. Select Road Departure Mitigation Setting.
6. Select from the options.

**Models with Display Audio**

1. Press the HOME button, then select Settings.
2. Select Vehicle.
4. Select Road Departure Mitigation Setting.
5. Select from the options.

### Important Safety Reminder

The RDM system has limitations. Over-reliance on it may result in a collision. It is always your responsibility to keep your vehicle within the driving lane.

The RDM system only alerts you when lane drift is detected without a turn signal in use. The RDM system may not detect all lane marking or lane or roadway departures; accuracy will vary based on weather, speed, and lane marker condition. It is always your responsibility to safely operate the vehicle and avoid collisions.
