

## Wi-Fi Connection

You can connect the audio system to the Internet using Wi-Fi on the audio/information screen. If your phone has wireless hotspot capabilities, the system can be tethered to the phone. Use the following steps to setup.

### ■ Wi-Fi mode (setting for the first time)

1. Press the **HOME** button.
2. Select **General Settings**.
3. Select **Connections**.
4. Select **Wi-Fi**.
5. Select **OK**.
6. Select **Change Mode**.
7. Select **Network**.
  - ▶ If the data sharing settings is to **OFF**, the message will be displayed on the screen. You need to change to **ON**.
    - ▶ **Customized Features P. 363**
  - ▶ If you want to turn off the Wi-Fi mode, select **OFF**.
8. Select the access point you want to connect to the system.
  - ▶ To add a new network or select the saved networks, select **Options**.
  - ▶ If **Options** is selected, **Add Network** and **Saved Networks** can be registered.

### ▶▶ Wi-Fi mode (setting for the first time)

You cannot go through the setting procedure while a vehicle is moving. Park in a safe place to set the audio system in Wi-Fi mode.

Some cell phone carriers charge for tethering and smartphone data use. Check your phone's data subscription package.

Check your phone manual to find out if the phone has Wi-Fi connectivity.

You can confirm whether Wi-Fi connection is on or off with the  icon on the system status area. Transmission speed and others will not be displayed on this screen.

## ■ Wi-Fi mode (after the initial setting has been made)

Make sure your phone's Wi-Fi setting is in access point (tethering) mode.

## ☒ Wi-Fi mode (after the initial setting has been made)

### iPhone users

You may need to go through an initial setup for Wi-Fi connection again after you boot your phone.
