Honda Sensing® Lane Keeping Assist System (LKAS)

Lane Keeping Assist System (LKAS)

Provides steering input to help keep the vehicle in the middle of a detected lane and provides tactile and visual alerts if the vehicle is detected drifting out of its lane.

Important Safety Reminders

The LKAS is for your convenience only. It is not an autonomous driving system and always requires driver attention and control. The system does not work if you take your hands off the steering wheel or fail to steer the vehicle.

The LKAS is convenient when it is used on freeways.

Do not place objects on the instrument panel. Objects may reflect on the front windshield and prevent correct detection of the traffic lanes.

The LKAS only alerts you when lane drift is detected without a turn signal in use. The LKAS may not detect all lane markings or lane departures; accuracy will vary based on weather, speed, and lane marker condition. It is always your responsibility to safely operate the vehicle and avoid collisions.

The LKAS may not work properly or may work improperly under the certain conditions:

- When you operate the turn signals to change lanes, the system is suspended, and resumes after the signals are off.
- If you make a lane change without operating the turn signals, the LKAS alerts activate, and torque is applied to the steering.

When it fails to detect lanes, the system will temporarily be canceled. When lane is detected, system will recover automatically.
Lane Keep Support Function
Provides assistance to keep the vehicle in the center of the lane. When the vehicle nears a white or yellow line, steering force of the electric power steering will become stronger.

Lane Departure Warning Function
When the vehicle enters the warning area, the LKAS alerts you with slight steering wheel vibration as well as a warning display.

Honda Sensing® Lane Keeping Assist System (LKAS)
The LKAS may not function as designed while driving in frequent stop and go traffic, or on roads with sharp curves.
Honda Sensing® Lane Keeping Assist System (LKAS)

When the System can be Used
The system can be used when the following conditions are met.
- The lane in which you are driving has detectable lane markers on both sides, and your vehicle is in the center of the lane.
- The vehicle speed is traveling between about 45 and 90 mph (72 and 145 km/h).
- You are driving on a straight or slightly curved road.
- The turn signals are off.
- The brake pedal is not depressed.
- The wipers are not in high speed operation.

How to activate the system

1. Press the MAIN button.
   - The LKAS indicator comes on in the multi-information display.
   - The system is ready to use.

2. Press the LKAS button.
   - Lane outlines appear on the multi-information display.
   - The system is activated.

Lane Keeping Assist System (LKAS)
If the vehicle drifts toward either left or right lane line due to the system applying torque, turn off the LKAS and have your vehicle checked by a dealer.
3. Keep your vehicle near the center of the lane while driving.
   ▶ The dotted outer lines change to solid ones once the system starts operating after detecting the left and right lane markings.

To Cancel

Press the MAIN or LKAS button.

The LKAS is turned off every time you stop the engine, even if you turned it on the last time you drove the vehicle.

Pressing the MAIN button also turns ACC on and off.
When the LKAS is suspended, the lane lines on the multi-information display change to contour lines, and the beeper sounds (if activated).

The system operation is suspended if you:
- Set the wipers to HI.
  - Turning the wipers off or setting it to LO resumes the LKAS.
- Decrease the vehicle speed to about 40 mph (64 km/h) or less.
  - Increasing the vehicle speed to about 45 mph (72 km/h) or more resumes the LKAS.
- Depress the brake pedal.
  - The LKAS resumes and starts detecting the lane lines again once you release the brake pedal.

Models with automatic intermittent wipers:
- Set the wiper switch to AUTO and the wipers operate at high speed.
  - The LKAS resumes when the wipers stop or operate at low speed.
The LKAS may be automatically suspended when:
• The system fails to detect lane lines.
• The steering wheel is quickly turned.
• You fail to steer the vehicle.
• Driving through a sharp curve.
• Driving at a speed in excess of approximately 90 mph (145 km/h).

Once these conditions no longer exist, the LKAS automatically resumes.

The LKAS may be automatically canceled when:
• The camera temperature gets extremely high.
• The camera behind the rearview mirror, or the area around the camera, including the windshield, gets dirty.
• The ABS or VSA® system engages.

The beeper sounds if the LKAS is automatically canceled.

Lane Keeping Assist System (LKAS)

LKAS Conditions and Limitations

The system may not detect lane markings and therefore may not keep the vehicle in the middle of a lane under certain conditions, including the following:

- **Environmental conditions**
  - Driving in bad weather (rain, fog, snow, etc.).
  - Sudden changes between light and dark, such as an entrance or exit of a tunnel.
  - There is little contrast between lane lines and the roadway surface.
  - Driving into low sunlight (e.g., at dawn or dusk).
  - Strong light is reflected onto the roadway.
  - Driving in the shadows of trees, buildings, etc.
  - Shadows of adjacent objects are parallel to lane markings.
  - Roadway objects or structures are misinterpreted as lane markers.
  - Reflections on the interior of the windshield.
  - Driving at night or in a dark condition such as a tunnel.
■ Roadway conditions

- Driving on a snowy or wet roadway (obscured lane marking, vehicle tracks, reflected lights, road spray, high contrast).
- Driving on a road with temporary lane markings.
- Faint, multiple, or varied lane markings are visible on the roadway due to road repairs or old lane markings.

<td><img src="image3" alt="Tire tracks" /></td>
</tr>
</tbody>
</table>

- The roadway has merging, split, or crossing lines (e.g., such as at an intersection or crosswalk).
- The lane markings are extremely narrow, wide, or changing.

Honda Sensing® Lane Keeping Assist System (LKAS)

- The vehicle in front of you is driving near the lane lines.
- The road is hilly or the vehicle is approaching the crest of a hill.
- Driving on rough or unpaved roads, or over bumpy surfaces.
- When objects on the road (curb, guard rail, pylons, etc.) are recognized as white lines (or yellow lines).
- Driving on roads with double lines.

<table>
<thead>
<tr>
<th>Lane void of lines at exit or interchange</th>
</tr>
</thead>
</table>

**Vehicle conditions**
- Headlight lenses are dirty or the headlights are not properly adjusted.
- The outside of the windshield is streaked or blocked by dirt, mud, leaves, wet snow, etc.
- The inside of the windshield is fogged.
- The camera temperature gets too high.
- An abnormal tire or wheel condition (incorrect sizes, varied sizes or construction, improperly inflated, compact spare tire, etc.).
- The vehicle is tilted due to a heavy load or suspension modifications.
